·		Primary Examiner Art Unit: 1771				

U.S. Patent and Trademark Office PTOL-303 (Rev. 08-06) Continuation of 11. does NOT place the application in condition for allowance because: In the particular argument regarding claim 36, it is noted that the present invention describes "non-woven rigid fiber tissue" in paragraph [0021] of the published document as having a weight of around 20-50 gsm and discloses that any type of rigid fiber may bused including carbon, metal, glass or other type of natural or synthetic fiber that are well known in the art that are not too soft or extensible. The prior art of Jackson (refer to Col. 4, lines 6-61); teaches the use of hydroentangled nonwoven fabrics and teaches that these are generally exceptionally strong and soft. The nonwoven, hydroentangled ply or backing can be made of generally any synthetic fibers, cellulosic fibers, mineral fibers such as glass, or any combinations of any of the foregoing. The reference teaches that suitable thicknesses for the nonwoven poly can vary and the fabric weight can vary considerably, however, fabric weights from about 47-61 gsm are generally preferred. It is the Examiner's interpretation that the substrate described by Jackson reads on Applicant's defined "non-woven rigid fiber tissue" as equated above. All other remarks have been noted, however, the Examiner re-states herein the position from the previous office action in order to address such remarks.
